

## **Policy document on environment and energy usage**

The Institute is committed to achieving sustainable development and energy conservation issues by practicing a few things and making awareness among students and society in a responsible fashion.

### **Policy Statement**

The prime objective of policy documents on environment and energy usage is to manage the usage of energy in a systematic way such that its impact on the environment can be minimized.

The policy document is applicable to all the stakeholders of the Institute.

### **Objectives**

- To create awareness about environmental issues among the students, faculty members, and the society
- To implement mechanisms for waste management
- To reduce waste production on the campus
- To encourage and implement a green campus/plastic-free environment
- To maintain sanitation and cleanliness
- To implement water conservation measures within the campus

### **Implementation strategy**

The prime focus of the work, which the institute will be carried out is as follows:

1. Energy Conservation and Management
2. Water Conservation and Management
3. Clean and green campus
4. Waste management

#### **1. Energy Conservation and Management**

The following strategy was finalized for energy conservation and management:

- Installation and usage of LED bulbs on the campus

- Creating awareness among students and faculty members regarding energy conservation and management by utilizing natural lights as much as possible
- Efforts to install solar-based power systems/power-efficient equipment

## **2. Water Conservation and Management**

The following strategy was finalized for water conservation and management:

- Rejuvenation of water and water bodies on the campus
- Periodic mending and repairs of leaks in pipes
- Organization of water conservation programs for the awareness
- Planting some indigenous plants requiring less water

## **3. Clean and Green Campus**

The following strategy was finalized for a clean and green campus:

- Maintaining cleanliness and sanitation on the campus
- Complete ban on single-use plastic on the campus
- Undertaking plantation drive on the campus

## **4. Waste management**

The following strategy was finalized for waste management:

- Reduction of waste produced on the campus
- Segregation and disposal of waste
- Practice the 4R strategies: Reduce, Reuse, Recycle and Reuse whenever possible

## **Conclusion**

The Institute is committed to take efforts for environment and energy usage. However, the strategies and procedures may change depending on government policies and resources available. All stakeholders will work in unison for sustainable development.
